NETOP™
Vision®7
Classroom Management Software

Modification Notes

Product version:	7.2
Build number:	7027
Shipping date:	August 15th 2011

Release Theme

This release expands Vision's capabilities through both web browsers support and language support in the Vision teacher's module user Interface. This release also includes a number of issue resolutions.

As a maintenance release, version 7.2 is available for download to customers subscribing to the Netop Advantage Program. To read more about what's new in Netop Vision7, please refer to the Release Notes at www.netop.com

If you have questions about your license or wish to purchase an upgrade to Netop Vision7, please contact Netop Customer Service or your local Netop Partner for more information.

New Features

Browser Support

We have expanded our supported browser to include Microsoft Internet Explorer 9 and Mozilla Firefox 4.

Netop Vision7 blocks both HTTP and HTTPS sites and is based on Layered Sockets Provider (LSP) filtering which blocks all available browsers. In addition Netop Vision7 has plug-ins for Microsoft Internet Explorer, Mozilla Firefox and Opera.

This extended browser support is available in all supported languages from Netop Vision version 7.2 onwards.

Additional Language Support

Netop Vision7 supports the following languages with translated user interfaces and help files:
- Dutch
- Finnish

- Swedish

To ensure a translation suitable for education, each has been undertaken by native speakers. As part of the quality assurance process, Vision7 has subsequently been reviewed by a native speaker familiar with the education market for the appropriate language

From version 7.2, Netop Vision7 is available in the following languages: English, German, French, Italian, Spanish, Dutch, Swedish, and Finnish.

Issue Resolutions

- Uninstalling Vision 6.9.1 student module caused problems with Internet Explorer 8

  The problems with Internet Explorer were caused by accidental removal of User Shell Folders from registry keys. This happened in the Vision student module uninstaller. When you upgrade from Vision 6.9.1 to newer versions, use this Microsoft fix http://support.microsoft.com/kb/886549 to resolve the Internet Explorer issue. If you want to run the fix in silent mode with no user interaction, use this command:
  msiexec /i MicrosoftFixit50356.msi /quiet
  In Vision7 version 7.0 and in newer versions, the issue has been fixed.
  Defect number: DE5683

- When using **Showcase Student** from a student computer with the Microsoft Vista operating system transmission was poor

  When the default transmission protocol was changed, **Demo** and **Showcase Student** would stop working or performance would be very poor on some operating system editions. This was caused by an issue in the connectivity layer between teacher and student modules.
  The behavior manifested itself on Windows XP when UDP (default transmission option) was changed to TCP and on Windows Vista and Windows 7 when the TCP (default transmission option) was changed to UDP. The issue has now been fixed.
   Defect number: DE6887

- Mozilla Firefox will now refresh a browser page once a web filter has been used to block it

  After blocking Web access for a student computer using Mozilla Firefox, a Web page stating "Internet Access is Denied" would be displayed. When the access restriction was removed, only some of the tabs would open within the browser and display the Web pages the student was viewing before Web access was blocked. Now all the tabs refresh and students can continue browsing from the page they were on previous to Web access being blocked.
  Defect number: DE7026

- The uninstall function under Manage Classrooms did not work correctly in Vision 7.1

  Due to a defect in **Classroom Manager**, the student module could not be remotely uninstalled. The issue has been fixed.
  Defect number: DE6921
